

Installation **acesories**

It is important to properly glue and seal installation work for best results, avoiding large losses of energy. A good bond would ensure durability and resistant to weathering.

Contact Adhesive is a synthetic polymer based glue which is ideal for bonding PE foam together, with an excellent ageing resistance characteristic & easy to spread when applying during installation.

Trocellen's DuraSeal is an aluminum foil tape with strong, high quality adhesive which provides good initial tack & permanent bonding for application on aluminum foil facing joints & seams.
